

How to Make a Posterous Space

1. Set up a class account at ww.posterous.com.
2. From the top of the page click on Spaces.
3. Click on either Create Public Space or Create Private Space. If you do not have permission from each of the parents to post photos on the Internet, then you need to create a private space.
4. Name your space.
5. Posterous will provide a URL for you.
6. Write in a description.
7. If you have the email addresses of your students, you can add them as members now, or you can add them later.
8. If you want to protect your space with a password, you can click on the space name. Then click on settings. Edit the settings. Click on privacy settings and select password protect my space. This is a great option so that people can only access the space if they are registered and know the password. You can better protect the identities of your students.
