

## How to Use Group Me

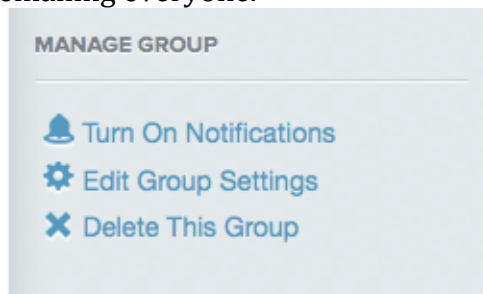

1. Make an Account at [www.groupme.com](http://www.groupme.com). After you login to your account click on start up a group:

2. Either you can add the students yourself or you can have them come and add their numbers or email addresses. Once you start the group you can send out a text question. Each student then sends texts or emails a response to the question. Everyone in the group will receive all the texts.

3. When you are done doing the activity make sure to go into the settings of the group and turn off the notifications so that the students will not keep emailing everyone.

4. You can use this program to have the students text conversations in the target language. You could set up a time outside of class for students to participate in this as well. You need to make sure that students have unlimited text messaging, because they will get a lot of texts in this activity.
